Integration with PMPnow

PMPnow integrates ILPMP information into a healthcare organization's Electronic Health Record (EHR), Electronic Medical Record (EMR), Pharmacy Management system, or Office of the National Coordinator Certified Health IT module.

PMPnow is a secure one-to-one connection that gives healthcare providers streamlined access to ILPMP data without signing into the ILPMP database, making searches up to six times faster. Depending on the type of connection, healthcare providers can also view other connected states' prescription information.

All Illinois healthcare organizations and pharmacies can connect to PMPnow through their software vendor or a PMPnow adapter. To request a connection to PMPnow, healthcare organizations should email a request to the ILPMP at dhs.pmp@illinois.gov, and software vendors should complete a "PMPnow Vendor Connection Request" form at ILPMP.org.

With Integration

- Log into EHR/ Pharmacy Management Software
- Select option to view ILPMP data in PMPnow
- Review ILPMP data for patient

Without Integration

- Log off EHR/ Pharmacy Management Software
- Open new browser window
- Log into ILPMP.org
- Search for patient
- Review ILPMP data for patient
